EURAVIA NORTH AMERICA IS LTS101 CERTIFIED

Euravia North America (“ENA”), a Magellan Aerospace division, has been approved by Intermountain Turbine Services as its designated component repair facility following its acquisition of the LTS101 engine type certificate from Honeywell Aerospace.

In May 2024, a non-disclosure and repair agreement was signed between ENA and Intermountain Turbines Services. ENA is now supporting Intermountain Turbines Services with repair developments to ensure the engine has full support for cost effective engine repairs for the operators.

“Part of ENA’s business plan is to support smaller independent engine shops in their efforts to extend the life of older legacy turbine engines,” said Steve Doughty, General Manager of Euravia North America. “Great engines never die; they just need dedicated shops and trusted partners.”

As a modern, FAA-, EASA-, and CAA-certified, AS9100-registered repair station, ENA continues to deliver best-in-class engine component repair and overhaul (R&O) services for Honeywell TPE331, T53, and LTS101; Rolls-Royce M250; General Electric CT58; and Bell Helicopter airframe components.

Attendees of VAI’s VERTICON 2026 in Atlanta, GA, from March 10-12, can meet the ENA team at exhibit #B3828 to learn more about the newest engine line in their range of maintenance, repair, and overhaul services.

About Euravia

Euravia Engineering and Supply Co. Ltd, and Euravia North America (<https://www.euravianorthamerica.com>) are wholly-owned subsidiaries of Magellan Aerospace Corporation. Euravia is internationally recognized as a Centre of Excellence for engine maintenance, repair, and overhaul and component R&O and supports over 150 customers in 50 countries.
